

# Community Care of the Elderly

## Mr. F's Journey – Current

Mr. F is a home care client with osteoarthritis, congestive heart failure and chronic obstructive lung disease.

Mr. F goes to the emergency department with acute pneumonia

Mr. F is paneled for PCH placement

**33 day wait**

Mr. F cannot move about independently because his functional needs are very high. His family is not confident they can support Mr. F at home

**Mr. F is admitted to a personal care home after 33 days in hospital**

## Mr. F's Journey – Post Consolidation

Mr. F is a home care client with osteoarthritis, congestive heart failure and chronic obstructive lung disease.

Mr. F goes to the emergency department with acute pneumonia

The hospital team consults hospital home care staff. Home care staff assess Mr. F as a candidate for Priority Home

After 70 days Mr. F no longer needs Priority Home. He goes back to receiving regular home care and avoids going to a personal care home

Discharged home in 15 days

Mr. F loses some of his ability to move independently. His family is not confident they can support Mr. F at home

Mr. F returns home after 15 days in hospital and receives Priority Home service for 70 days
